SENSORS & CONTROLS PRODUCTS

REVISED January, 2013

Bourns Sensors & Controls Product Line Introduces Model 3549, 3548 and 3547 Product Enhancements

In line with our commitment to product excellence and continuous improvement, Bourns Sensors & Controls Product Line is pleased to introduce product enhancements to the Bourns® [Model 3549 10-Turn Precision Potentiometer Series](#), [3548 5-Turn Precision Potentiometer Series](#) and [3547 3-Turn Precision Potentiometer Series](#) with a servo lid.

The current process for attaching the servo lid involves a mechanical rivet on the lid that attaches to the potentiometer housing. The new process will entail screwing the servo lid onto the potentiometer bushing. The servo lid will also be glued to the front mounting surface of the potentiometer. This modification is designed to increase reliability.

Current Design

Proposed Design

The appearance of the Model 3549, 3548 and 3547 will be different but the fit and function will not be impacted. Qualification test data is available upon request. Evaluation samples are available.

Implementation dates are as follows:

First date code using above changes: 1306M

Delivery of such products will begin: February 12, 2013
