Model 39 Product Marking Upgrade

In line with our commitment to product excellence, Sensors & Controls is introducing a product marking improvement to our [Model 39](#). The marking upgrade entails the use of laser marking in place of the white marking ink previously used. This change will improve piece part processing and provide the end customer with a more durable marking. The photos below show the difference in marking.

Ink print marking method

Laser print marking method

The change to laser marking will be implemented in production the week of May 4, 2009 starting with date code 0918.

Please note that **this change does not affect form, fit or function** of the product. There will be no changes to current prices, minimum order quantities or multiples.

Please ensure that your customers are notified of this product upgrade.
