Berlin, 18th of November 2020

Termination of Approvals for PLAS9-X

Dear Customer,

We would like to inform you about the expiry of the approval windows of our PLAS9-X module as per the following dates:

- PLAS9-X – PTCRB will expire on February 15, 2021
- PLAS9-X - GCF will expire on March 20, 2021
- PLAS9-X – AT&T will expire on March 19, 2021
- PLAS9-X – Verizon will expire on May 17, 2021

After these dates it is no longer possible to submit and pass a new customer device approval by leveraging the Thales Approvals and related test house reports on the PLAS9-X module.

If you are currently in the approval phase, please ensure that your approval is completed by the dates given above for a fast and efficient device approval.

Thales will not enter a renewal process for any of the expiring Approvals.

The deliveries/shipments from PLAS9-X will continue for existing approved customer applications. There are no restrictions on ongoing orders and deliveries of the module beyond the dates mentioned.

If you have further questions about existing or planned device development projects that may be needed after this Approval Window, please contact your local Technical Sales contact to determine the best way forward.

With best regards
